

**UNITED STATES OF AMERICA
BEFORE THE
FEDERAL ENERGY REGULATORY COMMISSION**

New York State Reliability Council, L.L.C.

Docket No. ER21-671-000

**MOTION TO INTERVENE AND COMMENTS OF
THE NEW YORK INDEPENDENT SYSTEM OPERATOR, INC.**

Pursuant to Rules 212 and 214 of the Commission’s Rules of Practice and Procedure,¹ the New York Independent System Operator, Inc. (“NYISO”) respectfully moves to intervene in this proceeding and offers its comments in support of the filing made by the New York State Reliability Council (“NYSRC Filing”).² The NYISO believes that an Installed Reserve Margin (“IRM”) of 20.7 percent for the New York Control Area (“NYCA”) for the upcoming 2021-2022 Capability Year,³ which runs from May 1, 2021 through April 30, 2022, falls within a range of reasonable levels of installed capacity (“ICAP”) required to maintain the reliability of the NYCA bulk power system. Accordingly, the NYISO supports the NYSRC’s request that the Commission approve the proposed IRM of 20.7 percent.

The NYISO also requests that the Commission accept and approve the NYSRC Filing effective February 15, 2021. As indicated by the NYSRC in its filing, such an effective date is necessary to provide sufficient time for the NYISO to calculate and post the minimum capacity requirements, and for Market Participants to prepare for the first ICAP auction that must be conducted for the Summer 2021 Capability Period that is scheduled to begin March 29, 2021.⁴

¹ 18 C.F.R. §§ 385.212, 385.214.

² *New York State Reliability Council, L.L.C.*, Filing of Installed Capacity Requirement for the New York Control Area, Docket No. ER21-671-000 (December 15, 2020) (“NYSRC Filing”).

³ Capitalized terms have the meaning ascribed to them in the NYISO’s Open Access Transmission Tariff and its Market Administration and Control Area Services Tariff (“Services Tariff”).

⁴ Section 5.13.2 of the Services Tariff requires the Capability Period Auction “be conducted no later than thirty (30) days prior to the start of the Capability Period”

Without this necessary information, the efficient operation of the NYISO's Summer 2021 ICAP auction could be seriously impaired.

Finally, as in prior years, the NYISO respectfully suggests that the Commission coordinate its decision in this proceeding with the actions that the New York Public Service Commission ("NYPSC") may soon take in response to the NYSRC Filing. Inconsistent determinations by the Commission and NYPSC would create uncertainty about what IRM the NYISO should use and, potentially, subject the NYISO to contradictory regulatory mandates. The NYISO also respectfully requests that the Commission not allow jurisdictional considerations to delay the timely implementation of its ICAP auction process.

I. Communications and Correspondence

All communications regarding this filing should be directed to:

II. Background

Section 3.03 of the New York State Reliability Council Agreement, which was approved by the Commission in connection with the formation of the NYISO and the NYSRC, obligates the NYSRC to submit any proposed revisions of the NYCA IRM to the Commission for

approval before the beginning of the Capability Year to which the change would apply.⁵ The IRM was set at 18.0 percent for the 2000-2001 through 2006-2007 and the 2010-2011 Capability Years.⁶ In intervening and subsequent years, the IRM has varied. The Commission accepted an IRM of 16.5 percent for the 2007-2008 Capability Year,⁷ 15.0 percent for the 2008-2009 Capability Year,⁸ 16.5 percent for the 2009-2010 Capability Year,⁹ 15.5 percent for the 2011-2012 Capability Year,¹⁰ 16.0 percent for the 2012-2013 Capability Year,¹¹ 17.0 percent for the 2013-2014, 2014-2015, and 2015-2016 Capability Years,¹² 17.5 percent for the 2016-2017 Capability Year,¹³ 18.0 percent for the 2017-2018 Capability Year,¹⁴ 18.2 percent for the 2018-2019 Capability Year,¹⁵ 17.0 percent for the 2019-2020 Capability Year,¹⁶ and 18.9 percent for the 2020-2021 Capability Year.¹⁷

The current IRM of 18.9 percent means that Load Serving Entities (“LSEs”) in the NYCA must procure capacity equal to 118.9 percent of their forecast peak load.¹⁸ In addition,

¹⁶ *New York State Reliability Council*, Letter Order, Docket No. ER19-659-000 (February 8, 2019).

¹⁷ *New York State Reliability Council*, Letter Order, Docket No. ER20-655-000 (February 7, 2020).

¹⁸ For example, the NYCA forecast peak load used for the IRM Study for the 2020-2021 Capability Year was 32,169 MW. The 18.9 percent IRM means the minimum ICAP requirement for the NYCA was 38,249 MW (*i.e.*, 118.9 percent of 32,169 MW).

there are separate location-specific ICAP requirements for LSEs in New York City, Long Island, and, collectively, Load Zones G, H, I, and J (the “G-J Locality”) that reflect the existence of transmission constraints in those areas. These location-specific requirements are determined by the NYISO given the NYSRC’s recommended IRM.

At the request of the NYSRC and in accordance with the Agreement Between the New York Independent System Operator and the New York State Reliability Council, the NYISO conducted a technical study that provided parameters for determining an IRM necessary to meet all applicable reliability criteria in the NYCA in the upcoming Capability Year. The NYISO employed General Electric’s Multi-Area Reliability Simulation (“GE-MARS”) model to determine the amount of ICAP that is required NYCA-wide to meet the governing resource adequacy criterion that the probability of an unplanned disconnection of firm load does not exceed one occurrence in ten years.¹⁹ The NYISO’s base case evaluation yielded a NYCA IRM of 20.7 percent for the 2021-2022 Capability Year.

The NYISO reported its results to the NYSRC’s Installed Capacity Subcommittee (“ICS”), which reviewed the results of the study, together with verification of the data inputs and modeling from General Electric, Consolidated Edison of New York, Inc., and PSEG Long Island. The results are reflected in the Technical Study Report (“2021 IRM Study”) prepared by the ICS and issued by the NYSRC on December 4, 2020, which is attached to the NYSRC Filing, dated December 15, 2019.²⁰

¹⁹ This criterion is known as the “Loss of Load Expectation” or “LOLE” and is the standard prescribed in the reliability rules of the Northeast Power Coordinating Council (“NPCC”) and the NYSRC.

²⁰ NYSRC Filing, Attachment A, “Technical Study Report: New York Control Area Installed Capacity Requirement for the Period May 2021 to April 2022.”

The NYSRC Filing highlights portions of the 2021 IRM Study.²¹ As described in its filing, the NYSRC Executive Committee relied on the base case results, its identification and evaluation of modeling and assumption changes that drove the increase in the 2021 IRM Study from the prior 2020 IRM Study base case value, and the numerous sensitivity studies that resulted in a range of IRMs that were higher and lower than the base case IRM.²² Based upon the study results and its experience and expertise, the NYSRC adopted the 20.7 percent base case value as the IRM for the 2021-2022 Capability Year.²³ On December 15, 2020, the NYSRC filed with the Commission its proposed NYCA IRM of 20.7 percent for the 2021-2022 Capability Year, requesting that the Commission accept its filing and issue an order no later than February 15, 2021.²⁴

On December 23, 2020, the NYSRC filed for the consideration of the NYPSC the 2021 IRM Study Report and appendices, and the resolution of the NYSRC Executive Committee adopting the 20.7 percent IRM for the 2021-2022 Capability Year. Also on December 23, 2020, the NYPSC published a notice under the State Administrative Procedures Act of its consideration of the proposed 20.7 percent IRM with a 60-day public comment period running until February 22, 2021.²⁵ The NYISO intends to file comments similar to those herein with the NYPSC in support of the NYSRC's adoption of an IRM of 20.7 percent for the 2021-2022 Capability Year.

²² *Id.* at pp 9–12.

²³ NYSRC Filing, Attachment B, Resolution by the NYSRC Executive Committee Approving the IRM for the 2021-2022 Capability Year.

²⁴ *Id.* at p 12.

²⁵ See Notice of Proposed Rulemaking, “New York State Reliability Council’s Establishment of an Installed Reserve Margin of 20.7%,” N.Y. Reg., I.D. No. PSC-51-20-00008-P (December 23, 2020).

III. Motion to Intervene

The NYISO is the independent body responsible for providing open access transmission service, maintaining reliability, and administering competitive wholesale markets for electricity, capacity, and ancillary services in New York State. Pursuant to its Commission-approved tariffs, the NYISO is also responsible for administering the ICAP auctions for the NYCA, including the Summer Capability Period Auction scheduled to begin March 29, 2021.²⁶ The NYISO's Services Tariff also requires LSEs within the NYCA to procure sufficient levels of capacity, including locational ICAP requirements for New York City, Long Island, and the G-J Locality.

Together with the ICAP Demand Curves, the NYCA IRM is a critical input into the NYISO's ICAP auctions because it is used to calculate each LSE's minimum NYCA-wide capacity requirement, and because the IRM and its data inputs are used to calculate Locational Capacity Requirements ("LCRs"). Specifically, the NYISO uses the adopted IRM to determine the capacity requirements for the NYCA as a whole for the upcoming Capability Year. It then uses the data underlying the determination of the base case for the IRM, and the IRM established by the NYSRC as a starting point in calculating the LCRs for LSEs. Those LCRs, together with the demand curve, determine the minimum amount of capacity that LSEs must procure. The NYISO informs the LSEs of their minimum capacity requirements and conducts auctions for each Capability Period (*i.e.*, summer and winter six-month capability periods), as well as monthly and spot market auctions.²⁷ Because the NYISO cannot fulfill its tariff obligations without the IRM, the NYISO has a unique interest in this proceeding that cannot be adequately

²⁶ The ICAP auction processes are described in Sections 5.13 and 5.14 of the Services Tariff.

²⁷ See Sections 5.12–5.14 of the Services Tariff.

represented by any other entity and should, therefore, be permitted to intervene with all of the rights of a party.

IV. Comments

A. The NYSRC's Proposal to Establish a NYCA IRM of 20.7 Percent for the 2021-2022 Capability Year is Reasonable

As explained above, the NYSRC has requested the Commission's approval to increase the NYCA IRM from 18.9 percent to 20.7 percent for the upcoming Capability Year. The NYISO believes that the proposed 20.7 percent IRM falls within a range of reasonable IRM levels because that value is the base case IRM value reported in the 2021 IRM Study. The 2021 IRM Study also provided results of numerous sensitivity studies producing a range of reasonable IRM levels that are consistent with maintaining reliability in New York State for the upcoming 2021-2022 Capability Year.

As provided by the NYISO-NYSRC Agreement, the NYISO assisted the NYSRC in conducting the 2021 IRM Study, including calculating the 20.7 percent base case value and sensitivity cases.²⁸ Five factors drove increases in the base case IRM between the 2020 and 2021 IRM Studies by a total of 3.1%. The most significant factors are an updated model of load forecast uncertainty (1.0% increase), the modeling of Energy Limited Resources ("ELRs") (0.9% increase) and the retirement of the second Indian Point Energy Center Unit 3 along with related topology changes (0.7% increase). Five parameters in combination drove decreases in the IRM from the 2020 base case by 1.3 percent. Of these five drivers, the most significant are a reduction in Special Case Resource ("SCR") registration coupled with improved performance (0.4% decrease), and updated load forecast (0.3% decrease). Each of the following three

²⁸ NYISO-NYSRC Agreement § 3.03.

parameters drove a 0.2 percent reduction in the base case IRM value: higher amounts of emergency operating procedure values, improved cable forced outage rates, and more emergency assistance from other Control Areas.

The net effect of the factors driving increases and decreases resulted in a 1.8 percent increase in the base case IRM value from 18.9% to 20.7% in the 2021 IRM Study. The NYSRC Executive Committee determined, based upon the base case result, modeling and assumption changes, and numerous sensitivity studies, that the 20.7 percent base case IRM value best satisfies the resource adequacy criterion and should be adopted for the upcoming Capability Year.

B. The Commission Should Act Expeditiously

The NYISO requests that the Commission act in time to provide a decision by February 15, 2021.²⁹ Pursuant to its tariffs, the NYISO has scheduled the first ICAP auction for the six-month 2021 Summer Capability Period to begin on March 29, 2021. The outcome of this auction will affect the monthly and spot capacity auctions that the NYISO will conduct for May 2021.

Accordingly, the NYISO must know the NYCA IRM sufficiently ahead of the scheduled auction so that it can calculate the minimum NYCA-wide and LCRs and transmit the information to auction participants. If the Commission acts by February 15, 2021, the NYISO is confident that it could complete this work on time. In accordance with its manuals and past practices, the NYISO has informed Market Participants that the new minimum requirements will be available by March 26, 2021. This information is conveyed in advance of the capacity auction for the six-month Summer Capability Period to provide Market Participants with sufficient notice of their

²⁹ The NYISO similarly intends to ask the NYPSC to act promptly in considering the proposed IRM level for the same reasons discussed herein.

capacity requirements so that they may develop or adjust their bidding strategies. The NYISO would prefer to start making the necessary calculations as early as possible in advance of this deadline. Further, without timely information, it will be much harder for ICAP Suppliers and LSEs to make economically efficient capacity procurement decisions.

C. The Commission Should Coordinate with the NYPSC to Avoid Imposing Inconsistent IRM Requirements

As in previous years, the NYISO respectfully suggests that the Commission coordinate its review of the NYSRC's proposed revision of the NYCA IRM with the NYPSC's inquiry into the subject. To the extent that both the Commission and the NYPSC address common questions, the NYISO asks the Commission to take reasonable measures to ensure that its determination is compatible with the NYPSC's determination. If the two agencies were to issue conflicting or contradictory orders to the NYSRC concerning the IRM level, confusion may ensue as to what IRM level the NYSRC should provide to the NYISO to use in the locational capacity calculations. If the NYSRC received conflicting regulatory directives, it would be forced to choose between them, leaving its choice susceptible to almost certain litigation. The probability of such litigation and the uncertainty as to its outcome would engender uncertainty about the LSEs' minimum requirements for the auction for the six-month Summer Capability Period (and possibly even the subsequent monthly and spot auctions). The resulting disruption and confusion would negatively affect the NYISO-administered markets and potentially threaten the reliability of the NYCA bulk power system.

Conflicting Commission and NYPSC rulings could also put the NYISO in the difficult position of being subject to inconsistent federal and state requirements. This would greatly complicate the NYISO's ability to fulfill its ICAP-related responsibilities under its tariffs. The NYISO could also be exposed to demands for refunds, and other potential legal claims, from

either LSEs claiming that the NYISO unlawfully required them to over-procure capacity or generators alleging an unlawful under-procurement and lost revenues.

The NYISO recognizes that the parallel reviews of the NYSRC's proposed revisions to the NYCA IRM could lead to disagreement between the agencies as to whether the Commission or the NYPSC, or both, have jurisdiction over the NYCA IRM. If a jurisdictional dispute should arise, the NYISO respectfully submits that the Commission should not allow the possibility of such dispute to interfere with the timely administration of its ICAP auctions.

V. Conclusion

WHEREFORE, for the foregoing reasons, the New York Independent System Operator, Inc. respectfully requests that the Commission: (i) accept its motion to intervene; (ii) approve the NYSRC's proposed revision to the NYCA IRM with an effective date of February 15, 2021; and (iii) coordinate with the NYPSC in order to avoid the possibility of inconsistent federal and state rulings.

Respectfully submitted,
