#### SUPPORTING CALCULATIONS AND NOTES Rate Formula Template

Formula Rate - Non-Levelized

Utilizing FERC Form 1 Data

#### **HURLEY AVENUE PROJECT - SYSTEM DISTRIBUTION UPGRADE**

General Note: References to pages in this formulary rate are indicated as: (page#, line#, col.#) References to data from FERC Form 1 are indicated as: #.y.x (page, line, column)

#### Note Letter

The balances in Accounts 190, 281, 282 and 283, as adjusted by any amounts in contra accounts identified as regulatory assets or liabilities related

to FASB 106 or 109. The formula uses the stated average of the beginning and end of year balances to prorate ADIT to comply with IRS normalization rules. Balance of Account 255 is reduced by prior flow throughs and excluded if the utility chose to utilize amortization of tax credits against taxable income as discussed in Note F. Account 281 is not allocated.

Identified in Form 1 as being only transmission related.

Cash Working Capital assigned to transmission is one-eighth of O&M allocated to transmission

Prepayments are the electric related prepayments booked to Account No. 165 and reported on Pages 110-111 line 57 in the Form 1. D Line 42 removes EPRI Annual Membership Dues listed in Form 1 at 353\_f (enter FN1 line #),

any EPRI Lobbying expenses included in line 42 of the template and all Regulatory Commission Expenses itemized at 351.h Line 42 removes all advertising included in Account 930.1, except safety, education or out-reach related advertising

Line 42 removes all EEI and EPRI research, development and demonstration expenses and NY Transco will not participate in EEI or EPRI.

Line 43 reflects all Regulatory Commission Expenses directly related to transmission service, RTO filings, or transmission siting itemized at 351.h Line 38 or Line 41 and thus Line 45 shall include any NYISO charges other than penalties, including but not limited to administrative costs.

E Includes only FICA, unemployment, highway, property, gross receipts, and other assessments charged in the current year

Taxes related to income are excluded. Gross receipts taxes are not included in transmission revenue requirement in the Rate Formula Template, since they are recovered elsewhere.

The currently effective income tax rate, where FIT is the Federal income tax rate; SIT is the State income tax rate, and p =

"the percentage of federal income tax deductible for state income taxes". If the utility is taxed in more than one state it must attach a work paper showing the name of each state and how the blended or composite SIT was developed. Furthermore, a utility that elected to utilize amortization of tax credits against taxable income, rather than book tax credits to Account No. 255 and reduce rate base.

multiplied by (1/1-T)

0.7250 Inputs Required: FIT = 0.21 SIT= 0.0650 (State Income Tax Rate or Composite SIT from Attach 3)

(percent of federal income tax deductible for state purposes) p = (not for profit entity ownership percentage)

For each Rate Year (including both Annual Projections and True-Up Adjustments) the statutory income tax rates utilized in the Formula Rate shall reflect the weighted average rates actually in effect during the Rate Year. For example, if the statutory tax rate is 10% from January 1 through June 30, and 5% from July 1 through December 31, such rates would be weighted 181/365 and 184/365, respectively, for a non-leap year.

The cost of debt is determined using the internal rate of return methodology shown on Attachment 5 once project financing is obtained. Prior to obtaining project financing, an interest rate of 3.85% from Table 4 of Attachment 5 will be used and will not be trued up. Attachment 5 contains an estimate of the internal rate of return methodology; the methodology will be applied to actual amounts for use in Appendix A.

After the completion of construction, the cost of debt will be calculated pursuant to Attachment 3

NYISO Tariffs --> Open Access Transmission Tariff (OATT) --> 6 OATT Rate Schedules --> 6.12.5.2.1 OATT Schedule 12 - Formula Rate Template

sodies are those facilities at a generator substation on which there is no through-flow when the generator is shut down.

Effect data amounts

ROE will be supported in the original filing and no change in ROE may be made absent a filing with FERC under FPA Section 205 or 206.

The corollal shocks will be the actual coroll.

Attachment 1 - Revenue Credit Workpaper\* HURLEY AVENUE PROJECT - SYSTEM DISTRIBUTION UPGRADE Account 454 - Rent from Electric Property (300.19.b) Notes 1 & 3 Account 456 (including 456.1) (300.21.b and 300.22.b) Notes 1 & 3 2 Other Electric Revenues (Note 2) 4 Revenues from Directly Assigned Transmission Facility Charges (Note 2)

Sum lines 2-5 + line 1

1 Rent from FERC Form No. 1

5 Rent or Attachment Fees associated with Transmission Facilities

3 Professional Services

6 Total Revenue Credits

Note 2

Note 1 All revenues booked to Account 454 that are derived from cost items classified as transmission-related will be included as a revenue credit. All revenues booked to Account 456 (includes 456.1) that are derived from cost items classified as transmission-related, and are not derived from rates under this transmission formula rate will be included as a revenue credit. Work papers will be included to properly classify revenues booked to these accounts to the transmission function. A breakdown of all Account 454 revenues by subaccount will be provided below, and will be used to derive the proper calculation of revenue credits. A breakdown of all Account 456 revenues by subaccount and customer will be provided and tabulated below, and will be used to develop the proper calculation of revenue credits.

All unfunded reserves will be listed above, specifically including (but not limited to) all subaccounts for FERC Account Nos. 228.1 through 228.4. "Unfunded reserve" is defined as an accrued balance (1) created and increased by debiting an expense which is included in this formula rate (column (e), using the same allocator in column (g) as used in the formula to allocate the amounts in the corresponding expense account)	
(2) in advance of an anticipated expenditure related to that expense (3) that is not deposited in a restricted account (e.g., set aside in an excrow account, see column (d)) with the earnings thereon retained within that account. Where a given reserve is only partially funded through accruals collected from customers, only the balance funded by customer collections shall serve as a rate base credit, see column (f). The source of monthly balance data is company records.

Notes 1 The IRR is the input to Debt Cost shown on Appendix A, Page 4, Line 95 during the construction period, after obtaining project financing, in accordance with Note G of Appendix A.

2. The IRR is a discount rate that makes the net present value of a series of cash flows equal to zero. The IRR equation is shown on line 4.

N is the last quarter the loan would be outstanding
t is each quarter.

Ct is the eash flow (Table 5, Col. I in each quarter) Alternatively the equation can be written as  $0 = C0 + C1/(1+IRR) + C2/(1+IRR)2 + C3/(1+IRR)3 + \ldots + Cn/(1+IRR)n$  and solved for IRR

The Excel M formula on line 2 is: (round(XIRR(first quarter of loan Col A of Table 5: last quarter of loan Col I of Table 5: last quart

- 3. Line 1 reflects the loan amount, the maximum amount that can be drawn on
- 4. Lines 5 through 13 include the fees associated with the loan. They are estimated based on current bank condition and are updated with the actual fees once the actual fees are known.
- 5. The estimate of the average 3 month Libor forward rate for the year on line 14 is that published by Bloomberg Finance L.P. during August of the prior year and is trued-up to actual
- average 3 month Libor rate for the year under the loan.
  Table 5, Col. C reflect the capital expenditures in each quarter
  Table 5, Col. D reflect the amount of the loan that is drawn down in the quarter
  Table 5, Col. E is the amount of principle drawn down
- 9. Table 5, Col F calculates the interest on the principle drawn down to date based on the applicable interest on line 16
  10. Table 5, Col. G is the total origination fees in line 10 and is input in the first quarter that a portion of the loan in drawn
- Table 5, Col. H is calculated as follows: (line 1/1000 less Col. E prior quarter)\*line 13/4 +line 12/4000+line 11/4000 Where A = Loan amount in line 1 less the amount drawn down (Table 5, Col. (E)) in the prior quarter

12. The inputs shall be estimated based on the eartest market conditions and is subject to true up for an inputs , e.g., rees, incress rates, spread, and rable 5 once the
amounts are known
13. Prior to obtaining long term debt, the cost of debt, will be 3.28%. If NY Transco obtains project financing, the long term debt rate will be determined using the methodology in Attachment 5 and Attachment 5 contains a
hypothetical example of the internal rate of return methodology; the methodology will be applied to actual amounts for use in Attachment A. After the first project is placed into service, NY Transco will use the its actual cost of
long term debt determined in Attachment 3. The capital structure will be the actual capital structure up to 53% equity.

Transmission facility Contributions in Aid of Construction

Note 1

These depreciation and amortization rates will not change absent the appropriate filing at FERC.

Note 1: The Contribution in Aid of Construction (CIAC) made for this project is assumed to be applied to offset all transmission plant categories with the remaining balance in account 35x for the new Smart Wire Devices for the purposes of calculating rate base and depreciation to be recovered.

\* Non-zero values in these columns may only be established per FERC order 

## NYISO Tariffs --> Open Access Transmission Tariff (OATT) --> 6 OATT Rate Schedules --> 6.12.5.2.1 OATT Schedule 12 - Formula Rate Template
